ABSTRACT

A card type input/output interface device includes a first connection part for transferring data between a main body of an electronic device and the card type input/output interface device, a second connection part which is coupled to the first connection part and transfers data between an external device and the card type input/output interface device, and a card supporting the first and second connection part. The first connection part is accommodated in the main body when the card type input/output interface device is inserted into a slot provided in the main body.
